Building Bulletin No. 08-01-Electrical

TO: All Building Permit Applicants, Contractors, Architects, Engineers, Designers, Sign Contractors, Electrical Contractors

FROM: Building Official

DATE: January 25, 2008

RE: Issuance of Permits for Installation of Electrical Signs

Pursuant to FS 489.513, installation of electrical signs must be performed by a registered or certified electrical contractor licensed by the Florida Electrical Contractors Licensing Board.

Permits for signs which entail electrical circuits, wiring, electrical lighting, ballasts, neon, or any other type of electrical component which will conduct electrical current must have a licensed electrical contractor as the Contractor of Record for the electrical portion of the work. A licensed sign contractor or general building contractor may perform the structural portion of the work.
